OUR COMPANY

B.I. Brooks and Sons, Inc. designs, engineers, fabricates and install conveyors and material handling systems. We provide these systems to manufacturers and distributors throughout the United States and in Mexico.

OUR PEOPLE

From our front office personnel to our field installers, we employ people who are well trained, knowledgeable, experienced and skilled. Our engineers and sales staff have the experience and knowledge to discuss and offer a wide range of options when reviewing a particular application. We use AutoCAD software to design our systems and will apply the 70 plus years of experience that our people have to all of our projects. We pride ourselves on our repeat business and look at ever opportunity, big or small, as the first step in a long-term relationship.

OUR MOTTO

- **Price**
- **Quality**
- **Service**

Price; consistently offering competitive pricing to evaluate each project and approach it with price as a consideration, then provide a cost effective solution.

Quality; furnish a quality product for each application. Quality is a must when delivering our equipment, we test and apply the highest standards to our products.

Service; we strive to offer the best service that a customer ever experienced, not just in our industry, but in their personal experiences. We do this by communicating through all aspects of a project and delivering on time.

In our ever growing desire to increase our business and better serve our customers we have opened an office in Mexico. The office is located in the Industrial Capital of Mexico, the City of Monterrey, N.L. This office offers the same services and expertise as we do at the headquarters in Olathe, KS

Headquarters:
15625 S. Keeler Terrace
Olathe, KS 66062
913-764-6617 phone
913-829-5494 fax

Mexico Office:
CD Sevilla 5837
Cumbres Santa Clara
Monterrey, N.L. C.P. 64346
52-81-1341-5567 or 5568

OUR LOCATIONS

SERVICES

- Evaluation of material handling processes to recommend and provide a cost effective solution.
- Provide a detailed proposal that includes scope of work, equipment specifications, delivery schedules and layout design.
- System design from the start when a need is identified and a solution is required. We review, recommend, discuss, design and implement our ideas and solution.
- Integrate equipment into the most ergonomic and logical path to avoid any loss of production.
- Design the system to improve a process and give the quickest Return On Investment (ROI).
- Engineering and project management from start to finish so the details of the system can be quickly implemented and provide the least amount of down time and disruption of the manufacturing process.
- Installation services for all types of material handling systems. We employ only skilled craftsmen who have been certified in our OSHA approved safety program.
- Maintenance, parts and repair services for a wide variety of conveyors, material handling equipment and machinery.
